ABOUT ME

Software Engineer specializing in backend development with C# and .NET Core, supported by solid frontend experience in HTML and jQuery. Highly skilled in designing and developing RESTful APIs using ASP.NET Core and building efficient, secure, and scalable database-driven applications. Proven experience in delivering comprehensive ERP solutions, including HRM, Time & Attendance, RFQ Automation, Supply Chain Management, Inventory Management, E-commerce, and School Management Systems. Actively involved in developing and integrating AI-driven projects to enhance automation, decision-making, and system intelligence. Strong problem-solving abilities with a focus on performance optimization, clean architecture, and maintainable code. Passionate about continuous learning and delivering high-quality, scalable software solutions.

CERTIFICATIONS

Great Learning, 08/11/2024
Project Management

Gained practical knowledge of project lifecycle management, scope definition, time and cost control, risk mitigation, and team coordination using industry-standard methodologies.

Mode of learning: Online

Hazza Institute of Technology, 17/01/2024
Cloud Computing

Completed intensive training under the IT Industry Academia Bridge Program (Govt. of Sindh), gaining practical knowledge of cloud computing concepts, cloud architecture design, deployment models, and scalable infrastructure solutions.

Mode of learning: Hybrid

PROJECTS

20/02/2024 – CURRENT
Rajby Textiles (Pvt.) Limited – Payroll & HRM System

- Designed and developed a scalable Payroll Management System using ASP.NET Core MVC to manage payroll operations for 2,000+ employees.
- Implemented automated salary calculations with support for allowances, deductions, overtime, and compliance rules.
- Integrated attendance data from ZKTeco biometric devices to ensure accurate payroll processing.
- Developed payslip generation with automated email dispatch to employees.
- Implemented multi-level approval workflows for payroll verification and authorization.
- Significantly reduced manual processing time, improved payroll accuracy, and ensured regulatory compliance for a large workforce.

19/10/2025 – CURRENT
RFQ Automation (AI-Enabled System)

- Working on the automation of RFQ (Request for Quotation) processes using AI-driven workflows.
- Implementing email-based RFQ intake, automatically extracting and processing RFQs received via email.
- Supporting manual order entry, purchase orders (PO), and inventory management within a single unified system.
- Integrating intelligent automation to streamline order processing, quotation generation, and procurement workflows.
- Aiming to reduce manual intervention, improve accuracy, and accelerate procurement cycle times.

01/12/2024 – CURRENT
Noor&Sons ERP System

- Developed a comprehensive ERP system using ASP.NET Core MVC to manage core business operations, including inventory, sales, procurement, and finance.
- Implemented role-based access control (RBAC) to ensure secure and authorized system access.
- Built real-time reporting dashboards to provide actionable business insights.
- Designed and integrated streamlined approval workflows tailored to organizational requirements.
- Centralized and automated day-to-day business operations, reducing manual effort.

11/11/2024 – CURRENT
Rajby Textiles' ERP system

- Led the modernization of Rajby Textiles' ERP system, migrating from a desktop-based application to a web-based solution using ASP.NET Core MVC.
- Designed and developed an end-to-end ERP Management System covering the complete business lifecycle, from order quotation to final execution, significantly improving operational efficiency.
- Implemented scalable and maintainable architecture using .NET Core, MVC, Web API, jQuery, JavaScript, Bootstrap, and MySQL.
- Enhanced system usability, performance, and accessibility through a modern web-based interface.
- Delivered a robust, secure, and scalable ERP solution aligned with evolving business requirements.

01/06/2022 – 30/06/2023
Transport Management System (Final Year Project)

- Designed and developed a comprehensive Transport Management System providing van services, carpooling, and bike pooling solutions for students.
- Built a responsive web dashboard using React.js for administration and monitoring.
- Developed cross-platform mobile applications using React Native for users and drivers.
- Implemented a scalable backend using Node.js with RESTful APIs.
- Utilized MongoDB for efficient data storage and management.
- Focused on improving transport accessibility, cost efficiency, and user convenience for student commuting.

VOLUNTEERING

15/06/2023 – CURRENT Karachi
VOLUNTEER

Actively volunteer in emergency relief and rehabilitation activities, supporting flood-affected communities through ration distribution, shelters, and basic aid. Contribute to both on-ground and digital support initiatives, with a strong commitment to humanitarian service and community recovery.
